

FLO KING IN-TANK TRASH TRAPS

ACCESSORY FOR QUICK CAPTURE AND REMOVAL OF LARGE PARTICLES AND SLUDGE

- TRAPS PARTICLES INSIDE CANISTER FOR MACRO AND MICRO FILTRATION
- ATTACHES AND REMOVES IN SECONDS
- AVAILABLE IN LENGTHS TO 30 INCHES (75 CM)
- FOR ONE, TWO OR EVEN FOUR CARTRIDGES
- GREAT FOR ELECTROLESS NICKEL, CLEANERS, AND MANY OTHER SOLUTIONS

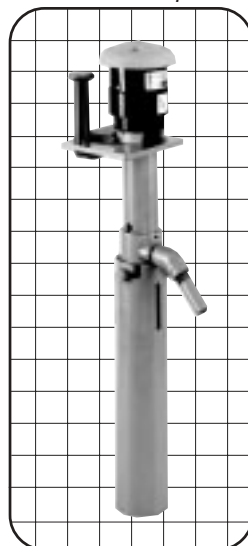

The Trash Trap removes large particles, while the filter cartridge removes small ones—macro plus micro filtration!

This accessory attaches easily to the BX1200 (shown in photos at right), as well as the BX650, BX3000, BX5000, BXL2500* and BXL5000* filter systems.

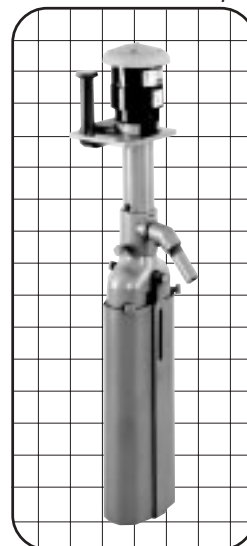

Use the regular Trash Trap over a single cartridge. Use the Double Trash Trap with a Double Cartridge Holder over two filter cartridges. Or use the Quad Trash Trap with a Quad Cartridge Holder and four filter cartridges.

* BXL2500 & BXL5000 require "S" Attachment (see Bulletin 32) when used with "Quad" arrangement.

FLO KING IN-TANK TRASH TRAPS

FLO KING filter systems are unique in that the filter cartridge is totally immersed in the solution and tank being filtered. In some cases, large particles and other debris may escape entrapment by the filter media—usually because of their size (large) or disposition (do not adhere well to filter cartridge). In these cases, the **FLO KING** Trash Trap is the accessory of choice.

The Trash Trap is a canister that simply slips over the filter cartridge in seconds. It neither hinders the high flow rate nor agitation of the pump. Large particles and other “trash” too large to be entrapped in the filter cartridge are captured in the Trash Trap and remain there.

Using a **FLO KING** filter system with Trash Trap will keep dirt, metal shavings, and other large particles off the tank bottom ... and in the canister. The counterflow agitation produced by the pump keeps the top of the solution skimmed and directs surface contaminants down toward the filter and Trash Trap for removal.

The unique design of the **FLO KING** filter system with Trash Trap makes it ideal for many solutions, including high-solids-containing baths such as cleaners. The Trash Trap also prevents “trash” from reentering the bath when changing filters.

Generally, we recommend you try the **FLO KING** filter system *without* a Trash Trap and then order one only if significant debris eludes the filter cartridge either during use or filter changes.

A bottom filtration unit is also available for the **FLO KING** filter system. Using the proper accessories (see Bulletin 32), it is possible to place the filter cartridge and Trash Trap along the tank bottom. Pictured here is a bottom filtration setup that includes a Horizontal Cartridge Adapter Kit (HCA Kit) and Trash Trap.

Bottom filtration allows the use of longer filter cartridges in shallow tanks.

Trash Traps are available in these sizes and in CPVC or polypropylene as standard materials of construction. Call for price and availability in PVDF (Kynar) or stainless steel.
